Buffalo SERVICE

MAdison 4911
Buffalo, N. Y.

When should you think about **SERVICE**

**Service is the most
important word in the world
when you need it...and even
the very best equipment
needs it occasionally**

The time to think about "service" is when you are buying new equipment. It is just as important as the equipment itself. Ask yourself: "Does the manufacturer have a high reputation for 'service'? Does he have the right kind of organization? Is it experienced, fast on its feet?" If you do check (or don't already know) you'll find that Buffalo has always had an *outstanding reputation* for "service" among sausage-makers. Buffalo *specializes* on sausage machinery...devotes its full attention to this one thing. Buffalo has had the years of experience necessary to develop the finest machinery and nation-wide servicing arrangements.

The best
bacons are
brought home
in it!

That's a fact:

The tastiest, best-looking, best-protected big-brand bacons rely on the new super-clear 75BF PLIOFILM for topflight protection!

Why have so many important packers changed over to this new PLIOFILM?

EASY! (1) it's second to none in clarity (2) stays smooth and wrinkle-free under constant exposure to

refrigeration moisture (3) insures longer life and better protection of both taste and aroma (4) won't "grease spot" other packages or even white-gloved customers, and (5) seals to a positive, heat-sealed weld that won't come loose, won't run or tear!

BONUS: the low cost of PLIOFILM, the outstanding workability of this film on automatic packaging machinery, the protection that ups your net profit a-plenty.

WRITE: The Goodyear
Packaging Engineer for full facts
and proof of new PLIOFILM performance!

Now even your bulky meats get superior protection with new vacuum packages made with Du Pont Mylar®

Superior Oxygen Impermeability. Chart shows the low gas permeability of vacuum packages made with "Mylar", even at high humidities.

Now, your franks and bulky luncheon meats can have the protective and selling advantages of vacuum packaging. A combination of Du Pont "Mylar"® polyester film and polyethylene makes it possible. Vacuum packages made with "Mylar" are extra-strong and durable, hold a vacuum and virtually eliminate frank greening, luncheon meat fading.

Production is improved with "Mylar," too. High-speed machines operate efficiently . . . save you money because durable "Mylar" makes tight seals, reduces package failures. Ask your vacuum packaging supplier or Du Pont Representative for full information. Or mail coupon to: E. I. du Pont de Nemours & Co. (Inc.), Wilmington 98, Delaware.

® "Mylar" is Du Pont's registered trademark for its brand of polyester film. Du Pont manufactures "Mylar", does not laminate, coat or make vacuum packages.

WEIGHING...

BATCHING...

Fairbanks-Morse Scales Offer New Economy, Accuracy, Speed...Electronically!

Belt conveyor scale and instrument

Read-out to auto-typewriter or tape

Punch card operated sequence batcher

Desk instrument for weighing

Desk instrument for weighing and printing

Sequence batcher for manual programming

Even Adapts to Present Mechanical Systems

Fairbanks-Morse electronic control and instrumentation permits remote location of weight recording instruments...assures automatic balance detection...automatic ranging without drop-weights...automatic zeroing...pushbutton recording and much more.

This same electronic control of weight measurement can be employed to streamline your batching operation. You can select precise quantities of all materials...in proper sequence...at the push

of a button. Or you can put the batching formula on a punch card and do the whole job automatically.

Weight readings can be fed to automatic typewriters, adding machines, tape punchers, etc. Chances are your present lever system can be converted to electronic operation.

For more information write today for new literature. Fairbanks, Morse & Co., 600 S. Michigan Avenue, Chicago 5, Illinois.

New LUSTER for HAMS and BACON

Patapar® Luster Parchment PRE-COMBINED WRAPPERS

Glamour, sales appeal, protection... and *economy* at the same time is offered by the new series of Patapar Luster Parchment wrappers. These pre-combined wrappers are complete units bound together at one edge by adhesive. You do no collating. There is no waste motion — no need for two or three paper inventories. Here is real economy!

Paterson TRIP-L-WRAP®

1. Outside printed wrap of Patapar Luster Parchment — high wet-strength, grease-resisting.
2. Middle sheet of Paterson Sorb-Pak.
3. Inside grease-proof barrier of Patapar Vegetable Parchment.

Paterson DU-L-WRAP®

1. Outside printed wrap of Patapar Luster Parchment — high wet-strength, grease-resisting.
2. Inside sheet of Paterson Absorbent or Sorb-Pak.

Different combinations of other Paterson papers also available

We will reproduce your present wrapper design, or if you wish, we will design a new and colorful wrapper for you.

For details and samples, write us on your business letterhead. Mention Patapar Luster Parchment and tell us your requirements.

- ★ Takes up less space
- ★ Uses less equipment at lower cost
- ★ Gives higher production with less men
- ★ Produces 15 to 45 cattle per hour

At last it is possible for the smaller packer to get the advantages of a completely conveyORIZED Can-Pak killing floor operation at a greatly reduced cost over the larger capacity layout of the regular Can-Pak method. By combining jobs on the killing floor, up to 45 cattle can be dressed per hour with only 20 men.* Floor requirements, depending on the shape of the available space, can NOW be as low as 2,000 sq. ft. in area. This makes it entirely possible to install a floor of this type in most already existing 2 or 3 bed floors. Thus expensive, time consuming building alterations are avoided and an economical-efficient Can-Pak installation can be arranged.

*This does not include viscera or head work-up.

"Globe equipment is now available through "NATIONWIDE" leasing program."

Ask Globe today for more details on this new, compact system for cattle killing.

Here is a new, low cost Can-Pak hydraulic hide puller for capacities up to 45 cattle per hour. Remember—nothing approaches the efficiency of a mechanical hide puller.

"BOSS" KNOCKING PENS

Increases efficiency by positioning animal properly and delivering it to hoisting location without manual assistance. Single or tandem units.

Cut Costs with new BOSS BEEF-KILLING EQUIPMENT

"BOSS" LANDING DEVICE

Automatic unit for smooth and sure transfer of animal from hoist to rail. Semi-elliptic springs add to efficiency and life of unit.

IMPROVE YOUR PROFIT-POTENTIAL

"BOSS" Beef Equipment cuts production costs and improves the profit-potential in beef slaughtering. "BOSS" units provide the smooth . . . continuous . . . safe movement of carcasses in volume with profit. Let experienced "BOSS" engineers show you how to gain increased volume and profits in existing floor space. Depending upon your particular operation and building, we will recommend either bed or rail cattle dressing systems. Write for complete information.

"BOSS" BEEF HOISTS

Electric hoist efficiently raises carcasses directly to the bleeding rail. Standard, brake type motors in 5 H.P. and 7 1/2 H.P. are available.

"BOSS" CARCASS DROPPER

Compact, efficient device for lowering carcasses from the bleeding rail to floor, controlled by internal expanding brake. Patented spring-actuated hook return to bleeding rail eliminates objectionable return weights.

Money Flows to Money

After we hear a statement repeated 40 or 50 times in a rather dogmatic way, we begin to wonder whether it's quite true, or, if true, whether some qualifications and reservations shouldn't be attached to it.

Forty or 50 is a pretty short count on the number of times we have heard or read some form of the assertion that "the meat packing industry can't attract the capital it needs because its profits are too low."

We believe that the above generalization should be toned down a bit to the effect that "some meat packing concerns can't attract the capital they need because their profits are too low."

We are inclined to believe, on the basis of the information that feeds through the PROVISIONER office, that there has been a rather substantial inflow of new capital (hundreds of millions of dollars) into the slaughtering and meat processing field during the last 10 to 12 years. We cannot believe that this investment flow started and continued in the absence of, first, some expectation of an attractive return and, second, an actual profit realization.

The prospect of money does attract money.

Moreover, also on the basis of information coming to the PROVISIONER, there are pretty strong indications that a good many small to medium-sized concerns—many of which are so closely-controlled that they could "cut and run" if they wished—have been voluntarily reinvesting a substantial portion of their earnings in expanding and modernizing their facilities. We do not believe they are doing so because they want to throw good money after mediocre.

Are we accepting too easily the conclusion that a situation is inevitable and general when, in a good many cases, enterprising firms are proving that it is not?

News and Views

Cattle Are the Brightest spot in the entire agriculture picture, and the future looks good, too," Secretary of Agriculture Ezra Taft Benson declared in Kansas City this week. The Secretary continued: "From time to time during the past six years, when cattle and hog prices were low, we have been put under terrific pressure by some groups to step in with unsound programs. Time and again we had to say 'No' to proposals which would have put the government into the cattle and hog business. We resisted these pressures for unsound programs and concentrated on sound measures. And the result is that the livestock economy is prospering—and farmers are still in control of their livestock industry. Livestock is the most expandable part of our farm market. Between 1948 and 1955 families of comparable middle incomes increased beef consumption by 35 per cent. Even so, it is said that the people of the United States are still on a hamburger standard of living. They haven't yet reached a beefsteak standard of living. We have learned a lot about how to breed and feed livestock better. We have learned that meat tenderness is inherited in animals and can be passed on—but we have yet to make extensive advances in developing more tender beef animals. Meat type cattle are in the picture, too. When the livestock industry can produce and market meat that is uniformly tender and that contains a high-level food value at attractive prices, an expanded market will result at home and abroad."

Investigation of Food Industry by the Federal Trade Commission (as predicted by the PROVISIONER on October 11), was announced this week by the FTC. The Commission resolution said the agency will "investigate and study the integration and concentration of economic power at the retail level of distribution in the food industry, which investigation and study shall include consideration not only of the organization, business, conduct, practices and management of corporations engaged in commerce and which sell food products at the retail level of distribution, but shall also include investigation and study of corporations operating as wholesalers, manufacturers, distributors, brokers, or otherwise concerned with the distribution of food products in commerce." The FTC said that many complaints have been received concerning the development in recent years of concentration of power, collusive price action and unfair competitive methods in the food industry.

1959 Annual Meeting of the American Meat Institute will be held at the Palmer House, Chicago, from Friday, September 25, to Tuesday noon, September 29.

Problems of Beef Slaughterers will get special attention at one session during the annual meeting of the midwestern division of the National Independent Meat Packers Association, to be held at the Hotel President in Kansas City, Mo., October 24 and 25. Another feature will be a talk by Dr. Roy Morse, head of the department of food science at Rutgers University, on technical and scientific developments of interest to meat processors.

Rail Rate Reductions on 33-000-lb. minimum shipments of fresh meats and packinghouse products from midwestern to Pacific Coast points will go into effect on November 15. The rate reductions, which range 5c to 36c, are designed to meet lower trucking charges. St. Louis meat packers recently asked the Interstate Commerce Commission to suspend proposed lower rail rates on hogs, westbound, which are due to go into effect on October 20.

AMIF Shows Meat Research Center to Group of Visitors

THE MEN, the physical plant and some of the scientific research being done on behalf of the meat industry were shown to visitors at an open house at the American Meat Institute Foundation at the University of Chicago on September 25. The pictures, from top to bottom of the page, show some open house scenes.

Guests gathered around Dr. W. A. Landmann, chief, division of analytical and physical chemistry, and dielectric generator used in heat processing experiments.

Miss Marion L. Birkner and Keith A. Huber, department of histology, explain how a microtome is used in slicing very thin sections of meat for study of changes affecting flavor, texture, etc.

O. F. Batzer, division of analytical and physical chemistry, demonstrates equipment used to measure levels of radioactivity in meat products.

Dr. James B. Evans, chief, division of bacteriology, describes some of the AMIF research on the complex problem of meat discoloration.

Guests assemble in AMIF library to hear a progress report by Dr. B. S. Schweigert, the Foundation's director of research and education. He stressed the need for continuing generous support of research by all segments of the meat industry.

LOOKING through the window of the office of the new Columbus plant (right), the plant itself appears across the street (left). Exterior of Roman brick is carried through to office wall.

Columbus Purveyor is Advertising With His Plant

WE KNOW that the extra cost of using prestige materials in the construction of our plant has been recaptured," reports Richard Moskovitz, vice president of the Stockyard Meat Co., meat purveyor of Columbus, Ohio. He explains that prior to moving into the new plant no more than 300 people in Columbus, a city of about 400,000, knew about the Stockyard Meat Co. He believes that 50 per cent of the townspeople now know about his organization.

The attractive building on a main traffic artery, has drawn the attention of passing motorists, many of whom have taken the time to stop and inspect the structure, as well as newspaper business editors who have featured it storywise in their publications.

The fact that many motorists see the plant is not the result of chance; the site was selected with great care. Almost 280 land parcels, with and without improvements, were considered before the final selection was made on the basis of available parking space, central location, accessibility and advertising value. It is estimated that each day about 20,000 vehicles pass the plant on Fourth street, a main artery leading from the downtown area to the northern part of Columbus. The traffic includes many public transportation buses.

The company name in stainless steel letters will soon be mounted on the roof. To make certain that passersby take note of the plant at night, a flood lighting system has been installed that automatically turns on at dusk. The electrical charge is a small investment for the advertising value derived, according to Richard Moskovitz.

The plant site is near a crosstown superhighway system that is under construction. When it is finished the firm's delivery trucks will be able to make a 4½-mile run one way, and go 2½ miles in another direction without encountering heavy traffic or stoplights. This will not only bring a saving in delivery costs, but it will also permit the firm to give its customers faster service; public feeders frequently run short and need meat in a hurry.

The decision to build an attractive plant and to locate it carefully sprang from the firm's experience in its former location. The old building, which had been con-

verted to a meat operation and modified several times in expansion, had no particular eye appeal and was located in a congested area. The present management team of Richard Moskovitz and his mother, Frieda, president, made the decision to build a sightly as well as an efficient unit. They reasoned that the public feeding industry depends on prestige to a large degree, and that their firm, as a purveyor to the field, should also merchandise its plant and products.

Street-fronting sides of the plant are built of 16-in.

LEFT: Hot and cold water and splashproof electrical outlets ring the walls of the fabricating room. RIGHT: Ceramic tile pieces can be replaced individually if damaged. In these pictures vice president Richard Moskovitz is pointing out quality features of construction.

Roman brick. In the front general office section is a reception room with rock gardens abutting the walls and furniture upholstered in leather. This area is flanked by two private offices panelled in selected oak, with window sills of imported marble. The office is perimeter-heated and air-conditioned. The canopy in front of the general office is made of stainless steel.

The work area is walled to ceiling height with ceramic tile set in special grease-, acid- and fungus-resistant mortar. The panels can be replaced individually if damaged. The work area contains a Thesco portable cooler furnished by C. Schmidt with walls and ceiling of steel panels with baked enamel finish. One of its two compartments, a freezer, will hold about 30,000 lbs., and the holding cooler section has a 35,000-lb. capacity. The portable cooler lends itself to expansion or modification: The panels are reusable, the whole unit can be rearranged to meet a future need and its reassembly does not create any mess.

The plant was designed with expansion in mind; the side walls carry the overhead load and the rear wall can be knocked out for expansion. Land back of the plant, which is now used as a receiving area, has been

CEILING heaters create a circular pattern of warm air circulation.

prepared for this possibility with plumbing lines, etc., installed.

Meat received at the rear of the plant moves into the holding cooler, to the main fabricating room and then is shipped via a side door. The forward flow pattern will not be impaired by expansion.

In the fabricating room, where the use of stainless steel has been emphasized, a Biro saw, Globe slicer and two tendering machines can be cleaned easily. Hot and

BAKED-ON enamel panels forming the walls of the portable cooler-freezer are easy to clean. Unit is reusable in another location.

cold water outlets are spotted around the walls and a number of waterproof electrical outlets have been provided for machine hookup. Eleven floor drains are installed within a relatively small area. A waterproof and greaseproof material furnished by U. S. Gypsum is used on the ceiling.

Two oversize unit heaters are installed in the fabricating area and have been placed to minimize heat loss and provide optimum comfort for employees. The heaters face each other from opposite sides of the room and, consequently, their blowers induce a circular air flow that is said to impede the entry of cold air when the shipping door is opened and to wipe dry the room walls and ceiling.

Warm air from the condensing refrigeration unit is vented to the outside through aluminum louvers which open when the cooling fan is running.

Floor and wall insulation is cork while the ceiling insulation in the fabricating room is fibreglas which is placed on top.

The plant is wired for a heavy electrical load to avoid expensive rewiring later when the need for power increases. Water lines and fittings are copper and brass for long and trouble-free life.

Management believes that many of its plant building costs, while somewhat higher than ordinary, will be its last costs, and will pay off in the form of lower cleanup, maintenance, repair and replacement expenses.

The company was founded in 1938 by the late Charles E. Moskovitz.

Food Store Employee Lag Costs Public Millions

A novel reason for keeping food prices low was advanced by Seth T. Shaw, vice president, Safeway Stores, Inc., addressing the 25th annual meeting of the National Association of Food Chains in Chicago.

"It has been demonstrated that we sell a great deal more food when prices to consumers are just as low as possible. If we sell more food, we attract more customers, and we thus do more volume. Our earnings on the total dollar volume amount to much more than the same percentage we

might make at slightly higher prices."

Carl Shaver of the Grand Union Co., East Paterson, N. J., told the 2,500 top executives attending the convention that the average supermarket employee is productive only 40 to 45 minutes out of each 60. He said that by boosting this to 55 minutes, food chains could save American shoppers \$252,000,000.

Livestock Institute Now Established in Panama

Creation of a Livestock Institute (El Instituto Ganadero) in Panama has been approved by the permanent

legislative commission of that country. The purpose of the Institute is to plan, direct and coordinate export of beef produced in the country.

The new agency will be managed by an executive director and a board of directors. The ministers of agriculture, commerce and industries, and finance and treasury will be permanent directors. The remaining four members will be representatives of the livestock industry.

Expenses of the Institute are to be covered by a tax of \$1 for each steer and 50c for each cow slaughtered within the Republic. The new tax is to be paid by the owner of the animal.

LEFT: Section of sausage made with conventional emulsion. RIGHT: Sausage made with the pump-emulsifying system.

Pump System for Sausage Preparation-Stuffing

A SAUSAGE preparation-stuffing system, designed for large volume and semi-continuous operation, has been pilot-tested and was described and shown in model form by its developers, Pavia Process, Inc., and Master Spline Tool & Gauge Co., at the recent convention of the American Meat Institute.

The closed system, as tested in a large midwestern sausage kitchen, has the following elements: a grinder, jet comminutor, food pump and stuffing cock. The meat batches are coarse-ground and mixed with the curing material and spices before being fed into the grinder. The ground meat flows directly into the comminutor and from there is pumped to a cock mounted on a stuffing table. The pilot arrangement has attained production of 1,300 lbs. per hr. and, with a minor modification, capacity will be increased to 3,000 lbs. per hr. The full system, as visualized in the flow diagram on this page, will have a capacity between 20,000 and 30,000 lbs. per hour.

In pilot testing the product was moved from the grinder to the stuffer with only a 2° F. temperature rise. During one experimental run the emulsion was fed back through the whole cycle and, in this instance, the product temperature rise was 8° F.

The comminutor, with cutting action described as similar to that of

scissors, produces emulsion of very fine texture. The food pump stuffs the product firmly into the casings so that there are no air pockets in the product.

The proposed system will embody a grinder to reduce the boneless meat to the desired size. The ground meat will be discharged into one of two mixing tanks where the components required for a batch will be assembled. A mixed batch will be pumped to the comminutor which will rapidly emulsify the material. The emulsified meat will flow into a mixing-holding tank from which it will be pumped to the stuffing stations. The system will be equipped with a by-pass to

maintain constant pressure on the stuffing cocks and excess product will flow back to the holding tank. The two mixers and holding tank will have sufficient capacity to maintain the stuffing operation as a continuous process even though the meat is ground and mixed on a batch pattern.

About 10 hp. will be needed for the whole system at the 20,000- to 30,000-lb. level. All the equipment is made from stainless steel and will be sanitized by the in-line technique employed in the dairy industry.

The system as engineered is geared to large production runs and does not lend itself to making a variety of sausage in small lots.

SCHEMATIC diagram of the new system. The meat flow is from the grinder (top) to the mixing tanks; thence to the comminutor. The emulsion then goes to a holding tank from which it is pumped, as needed, to the stuffing cocks (center foreground) or goes back to the holding-mixing vessel.

By J. A. CABLE, Application Engineer,
Centrifugal Pump Department,
Allis-Chalmers Mfg. Co.

How to Keep Those Centrifugal Pumps Performing Well For A Longer Period

CENTRIFUGAL pumps, properly installed and applied, are designed to provide efficient service, which with systematic care, can be considerably prolonged.

All centrifugal pumps are basically alike. The four main types—double and single suction, multi-stage and non-clog units—all consist of almost identical inside components.

Since operating conditions vary widely, it is difficult to come up with a blanket schedule of preventative maintenance that will satisfy all pump requirements. Different types of applications may require different maintenance schedules. As a basis for establishing a program best adapted to your operation, a relative timetable may be helpful. Tips on what to look for when your pump causes trouble will also be found in the several "trouble" charts which appear on page 19.

At the outset, it is a good idea to make sure that the conditions adhered to at the time the pump was set up—proper piping, alignment of the units and priming—still prevail.

Generally, the pump's rotating element should be removed and inspected for wear once a year. Wearing ring clearances should be approximately no more than .003 per inch on diameter of the rings. If the pump's efficiency has fallen off to where it won't deliver the required amount of liquid, it may be that the wearing rings need replacement. For single suction pumps, this can be done in either of two ways. Heat the pump casing around the ring with a torch to expand the metal around the ring and it will slip out. Or, shrink the ring by packing the inside with dry ice. Either method can also be used to

install the new ring. When pumps have impeller wearing rings they are also removed by using heat on the ring or they can be cut off with a cold chisel. The replacement rings will have to be heated to expand them so that they can be slipped onto their respective fits.

During the same period, deposit or scaling should be removed. Cleaning up the impeller will increase its efficiency. Some deposits on the impeller can be removed with a wire brush while others may require chemical cleaning fluids. If there is evidence of pitting, it may be that you have been operating the pump too fast. Check the pump's specifications with your supplier to see whether you may be using the wrong pump for the job, or the wrong speed motor to drive the pump. If the casing surface is tuberculated, it is well to also clean it with either brush or cleaning fluid

SHRINKING RING by packing the inside with dry ice is useful in removing and installing wearing ring on single suction pump.

IN REPACKING a pump, the kind of packing used depends upon the liquid being pumped. If operator is uncertain as to what kind of packing to use, pump supplier should be queried.

to restore the original efficiency. Casing tuberculation can be prevented by applying one of the new plastic coatings to the water passages in new pumps and following thorough cleaning can also be employed in installations already in existence.

It is helpful to clean out the water seal piping annually. Pipe conditions can be determined by measuring and recording the total suction and discharge pressures and comparing them with figures of the previous test.

Foot and check valves should also be inspected once a year, particularly those which must safeguard against water hammer when the pump stops.

It is advantageous to replace packing, using the grade recommended by the pump manufacturer, every six months or when ordinary tightening fails to stop the leakage. Seal cages should be centered in the stuffing boxes at the entrance of water seal piping or no sealing liquid will be able to get down to lubricate the packing. When all the old rings are out, clean the inside of the box and check shaft sleeves for scoring.

Different kinds of applications require different kinds of packing. It all depends upon the liquid being pumped. Each ring of new packing is measured by wrapping the material snugly around the shaft. Then the ring is cut off so the ends just meet but do not overlap. Each ring is then tamped into place and firmly seated before the next ring is added. By staggering the joints 90° or so, the liquid doesn't have a straight path to the outside.

Where the stuffing box runs too hot because of the nature of the job or the location of the pump, installation

of a quenching gland, a cooling water jacket, or both, will solve the problem. These factors should, of course, be given proper consideration when specifying the pump so that when necessary they can be included in the original construction. A coolant circulated through these cools off the packing.

If there is still too much water leaking from around the shaft after repacking the stuffing box, it is probably because the sleeve is scored.

Since extensive scoring will accelerate packing wear, it is good economy to replace badly scored sleeves with new ones. To replace a sleeve, the pump must be taken down and the shaft pulled. The old sleeve is then pressed off in an arbor press and the new one fastened on. One way to eliminate this bother is to use a mechanical seal. There are many different types of mechanical seals and they are growing in popularity. In fact, many small types of pumps now have seals as standard construction. Despite their higher initial cost, mechanical sealing usually pays off in lower maintenance.

The alignment of the pump and motor should be checked every six months and units shimmed up as needed. If misalignment recurs frequently, the entire piping system should be inspected. Strain on the pump casing can be determined if, by unbolting the piping at the suction and discharge nozzles, the piping springs away. At the same time the entire system is inspected, piping supports should be checked for soundness and effective load support.

In lubricating a pump, it should be remembered that different types of pumps have different bearings. There are sleeve bearings and ball and roller or anti-friction bearings. On sleeve bearings oil is always used. Some ball and roller bearings are also lubricated with oil but many are grease lubricated. You can't get too much oil on sleeve bearings and a surplus won't particularly hurt anti-friction bearings. However, too much grease causes friction in ball and roller bearings and will score the races.

It is well to drain the lubricant once every three months and wash out the oil wells and bearings with kerosene. Sleeve bearings should be checked to see that oil rings are free to turn with the shaft. Defective shafts should be repaired or replaced. In refilling the oil wells, it is best to use the lubrication recommended by the pump manufacturer.

Sleeve bearings should also be measured at this time and replaced if the wear is excessive. In general, two thousandths of an inch clearance

HOW TO LOCATE TROUBLE: No Water Delivered

CAUSES	CURES
1. Lack of prime.	Fill pump and suction pipe completely with water.
2. Speed too low.	Check whether motor is directly across-the-line and receiving full voltage. Frequency may be too low, or motor may have an open phase. Correct.
3. Discharge head too high.	Check pipe friction losses. Larger piping may correct condition. Are valves wide open?
4. Suction lift too high.	If no obstruction at inlet, check for pipe friction losses. However, static lift may be too great. Measure with mercury column or gauge while pump operates. If static lift is too high, water to be pumped must be raised or pump lowered.
5. Impeller completely plugged.	Remove top of pump casing and clean impeller.
6. Wrong direction of rotation.	This sometimes occurs! Compare turning of motor with directional arrow on pump casing.

HOW TO LOCATE TROUBLE: Not Enough Water Delivered

CAUSES	CURES
7. Air leaks in suction piping.	If liquid pumped is water or other non-explosive, and explosive gas or dust are not present, you can test flanges for leakage with flame or match. For such liquids as gasoline, suction line can be tested by shutting off or plugging inlet—putting line under pressure. Seal leaks.
8. Air leaks in stuffing box.	Check to see if thin stream of water flows from stuffing box while pump operates. If not, and adjusting gland to reasonable extent does not produce flow, new packing probably is needed. Or, water seal piping may be plugged and need cleaning out. Lantern ring may be displaced and need centering at water seal piping.
9. Speed too low.	See item 2, first table.
10. Discharge head too high.	See item 3, first table.
11. Suction lift too high.	See item 4, first table.
12. Impeller partially plugged.	See item 5, first table.
13. Defective wearing rings.	Inspect. Replace if worn excessively.
14. Defective impeller.	Inspect. Replace if damaged or blade sections badly eroded.
15. Defective packing.	Replace packing and sleeves, if badly worn.
16. Foot valve too small or partially obstructed.	Inspect. Area through ports of valve should be at least as large as area of suction pipe—preferably 1½ times. If strainer is used, net clear area should be three to four times area of suction pipe.
17. Suction inlet not immersed deep enough.	If inlet can't be lowered, or if swirling eddies through which air is sucked persist when it is lowered, chain a board to suction pipe. It will be drawn into eddies, smothering the vortex.
18. Wrong direction of rotation.	Symptoms are an overloaded drive and about one-third rated capacity from pump. Compare turning of motor with directional arrow on pump casing.

HOW TO LOCATE TROUBLE: Not Enough Pressure

CAUSES	CURES
19. Speed too low.	See item 2, cures first table.
20. Air or gases in liquid—e.g. marsh gas in swamp water. (Test in laboratory, reducing pressure on liquid to pressure in suction line. Watch for bubble formation.)	May be possible to overrate pump to point where it will provide adequate pressure despite conditions. Better to provide gas separation chamber on suction line near pump, and periodically exhaust accumulated gas.
21. Mechanical defects.	See items 14, 15, 16, second table.
22. Too small impeller diameter (probable cause, if none of above).	Check with pump manufacturer to see if larger impeller can be used. Otherwise, cut pipe losses, or increase speed—or both, as needed. Be careful that you don't seriously overload your drive.

More trouble charts appear on page 20.

should be allowed, plus one thousandth of an inch for each inch or fraction of an inch of shaft journal diameter.

Bearing temperature ought to be checked once a month with a thermometer, not by hand. If anti-friction bearings are running too hot, they may need more lubricant. Where a modification of the amount of lubrication applied does not correct the condition, the bearing should be disassembled and inspected or the alignment of the pump and the motor should be checked.

In installations which call for leakless handling of liquids, there is available a pump which requires neither mechanical seal nor packing. Carbon sleeve bearings, impervious to most known chemical and corrosive agents, are used in the motor. A thin wall "stator can" passes from the pump casing through the air gap of the motor to the rear housing sealing off the stator core iron and windings from the pumped liquid. Pump and motor are a single integrated unit. Shaft, rotor and bearings are immersed in the pumped liquid. The induction rotor, clad in corrosion-resistant stainless steel, rotates in a portion of the fluid being pumped and

HEATING PUMP casing around the wearing ring with a torch to expand the metal permits easy removal of the ring for replacement. The same job can be performed with the aid of dry ice (see page 18).

is cooled by it. The air-tight unit is not subject to external conditions or atmosphere. While this type of pump is ideal for handling costly or volatile substances, it is still not economic to install it merely to do away with the inconvenience of repacking or replacing mechanical seals.

HOW TO LOCATE TROUBLE: Pump Works for a While and Quits

CAUSES	CURES
23. Incomplete priming.	Free pump, piping and valves of all air. If high points in suction line prevent this, they need correcting.
24. Suction lift too high.	See item 4, first table.
25. Air leaks in suction piping.	See item 7, second table.
26. Air leaks in stuffing box.	See item 8, second table.
27. Air or gases are entrained in liquid.	See item 21, third table.

HOW TO LOCATE TROUBLE: Pump Takes too Much Power

CAUSES	CURES
28. Head lower than rating, pumps too much water.	Turn down impeller's outside diameter in amount advised by pump manufacturer.
29. Liquid heavier (in either viscosity or specific gravity) than allowed for.	Use bigger motor.
30. Wrong direction of rotation.	See item 19, third table.
31. Stuffing boxes too tight.	Release gland pressure. Tighten reasonably. If sealing water does not flow while pump operates, replace packing. If packing is wearing too quickly, replace scored shaft sleeves and keep water seeping for lubrication.
32. Casing distorted by excessive strains from suction or discharge piping.	Check alignment. Examine pump for friction between impeller and casing, worn wearing rings. Replace damaged parts.
33. Misalignment.	Realign pump and motor.

Federal Inspection Granted To Nine Companies by MID

The Meat Inspection Division of the U. S. Department of Agriculture has granted meat inspection to:

Swift & Company, 919 Senate st., Columbia, S. C.; Superior Packing Co., 1010 W. Pershing rd., Chicago; Rosenthal Packing Co., Inc., 1101 N. E. 23rd st., Fort Worth; Cass County Canning Co., 1403 Center st., Brownwood, Tex.; Whitehall Packing Co., Whitehall, Wis.; Varallo & Cella, Craighead st., Nashville; Danfoods Co., 2630 E. Gage st., Huntington Park, Calif.; McCabe Packing Plant, Route 29 West, Taylorville, Ill., and P & H Packing Co., Kaufman, Tex.

Federal meat inspection has been withdrawn from these establishments:

Armour and Company, Columbus ave., Walpole to Burke sts., Boston; Armour and Company, 2030 Clark ave., St. Louis; Iowa Beef Co., Inc., 75 South Market st., Boston; Levin Dressed Beef Co., Inc., 816 Noble st., Philadelphia; Jiffy Steak Co., corner 3rd and 15th sts., Freedom, Pa.; Sonora Meat Co., Wards Ferry rd., Sonora, Calif., and Joseph Lorneo, 2217 Dwyer ave., Utica, N. Y.

The MID also announced the change in official name of the following establishments:

The Baltimore Provision Co., 118 S. Central ave., Baltimore, instead of The Baltimore Kosher Provision Co.; Gasper's Linguica Co., Inc., 540 Dartmouth st., South Dartmouth, Mass., instead of Continental Sausage Co.; General Cold Storage Co., 233 E. Grand ave., South San Francisco, instead of South San Francisco Cold Storage and Warehouse Co., and King Packing Co., Inc., 1511 N. Concord st., South St. Paul, instead of Casino Pizza Co., Inc.

Certain Canned Meats Gain Over Fresh Meat Since 1947

Greater variety, improved quality and convenience factors have led to a four-fold per capita gain of canned meat products over fresh meat during the past ten years, according to a speaker at the recent 39th annual convention of the National Meat Canners Association in Chicago.

In his address on the growth of canned meat, W. S. Woodside, central area manager of management service, American Can Co.'s Canco division, pointed out that of the eight major items discussed, spaghetti meat products, meat stew, chili and ham made the largest gains. Spaghetti meat products between 1948 and 1957 led all others with a 210 per cent increase.

MORE APPETIZING—Bacon cured with Du Pont "Cylan" stayed golden brown during cooking while sugar cured bacon burned and charred.

Side by side cooking test shows:

New curing ingredient

Du Pont **Cylan**[®]
SODIUM CYCLAMATE

gives greater convenience and
customer appeal to your bacon

For more details about Du Pont "Cylan" Sodium Cyclamate... turn the page

Bacon cured with Du Pont CYLAN[®] Sodium Cyclamate offers you these sales advantages:

- Resists burning or charring
- Cooks to a golden brown
- Leaves the pan clean
- Leaves cleaner fat
- Has a clean, sweet flavor

Now... greater convenience and customer appeal for your bacon! The reason—Du Pont "Cylan" used in place of sugar. This *new* curing ingredient reduces charring or burning during cooking. It gives bacon a rich golden brownness and an excellent flavor—clean and sweet. Pans are easier to clean. Renderings are lighter in color... contain less debris. Yet the appearance and keeping qualities of the packaged bacon remain unchanged!

All these advantages can be incorporated in your bacon without any changes in equipment or curing methods. Furthermore you can now sweeten your bacon to any level you desire for optimum flavor without encountering undesirable cooking qualities.

Du Pont "Cylan", an artificial sweetening agent with about 33 times the sweetening power of sugar, is stable to heat and cold. Works equally well in all curing processes. Approved by M.I.D. for use in bacon.

FOR MORE INFORMATION: Just fill out and mail coupon below.

Bacon cured with "Cylan", top, was fried in left side of pan, conventionally cured bacon in right side. Note how "Cylan" didn't char or leave burnt residue in the pan.

FOR BACON

Switch now to this modern bacon cure—CYCLACURE—a completely balanced and dispersed curing medium. CYCLACURE incorporates "Cylan" sodium cyclamate in correct and accurate proportion to nitrite content. Conventional

curing methods produce a finished product that maintains a bright lean color and a light fat color through marketing and cooking.

CYCLACURE HAS MANY OUTSTANDING ADVANTAGES

- can be used for injection curing of bacon
- effective in producing dry rubbed or box cured bacon
- complete sweetness diffusion throughout each belly
- normal curing procedures produce utmost color development and stability
- customer appeal at its best—no darkening, charring or burnt residue

KOLD-HOLD® TRUCK REFRIGERATION

MARK
mechanical

CROWN
hydraulic

RANGE
retail milk

CREST
packaged condensing unit

BLOWERS
hi and low temp

PLATES
quick action and hold-over

ALL THE REFRIGERATION YOU NEED... and more too!

The complete KOLD-HOLD line provides the right combination of drive, condensing unit and plates or blower to produce and maintain required body temperatures for each individual truck and type of service. You get all the cooling power needed without paying for more equipment than is required to do the job. KOLD-HOLD systems can be tailored to meet a variety of body temperatures (from -10 to +60 degrees), frequencies of door openings, lengths of routes and other requirements.

Your KOLD-HOLD representative is well qualified to help you with your specific truck refrigeration problems. Backed by KOLD-HOLD experience of over 25 years in engineered truck refrigeration and equipped with Ranchero demonstrators which can bring operating units to your door, he can show you how KOLD-HOLD systems will give you better product protection at lower overall cost.

This combination of the mechanically driven MARK condensing unit with a TURBO-JET blower produces exceptionally fast temperature recovery after door openings and is the ultimate in weight savings. It is recommended for milk, meat and any trucks which require temperatures from 40° to 60°.

The flexible shaft drive is highly efficient and trouble free. In fact, the entire MARK unit has proven its efficiency, dependability and serviceability in thousands of trucks in the field. From its corrosion resistant finish to its aircraft-type base construction it was designed and built for rugged durability. Unique "Swing-Down" design permits fast, easy servicing. The unit is mounted on the chassis rail with brackets. No holes to drill. Condenser unit swings down to expose all parts. No special compartments are needed.

TURBO-JET blower design produces movement of more air through the coils and more effective air movement through the truck body than other blowers of comparable size for faster "pull down." It also features automatic defrost without temperature "upswing" during the defrost cycle.

A NEW COMPLETE-PACKAGE CONDENSING UNIT

The KOLD-HOLD CREST condensing unit was specifically designed for freezing "Hold-Over" plates in a parked truck on "stand-by" or over night. You simply plug it into an electrical outlet. Complete with cover and ready for mounting on the truck chassis rail, the unit eliminates the need for hand-building a special compartment or "dog-house" and provides economy and ease of installation. Its "slide-out" base unit makes servicing easy.

HOLD-OVER PLATES

These streamlined plates give maximum refrigeration through full eutectic capacity and exceptionally effective air flow. Internal fins spread heat absorption qualities over the entire surface areas on both sides of the plates. Patented perimeter freezing permits complete filling of the plates without danger of strain on the seams during freezing. You get more hold-over refrigeration with less weight.

Armour Identifies Brands Of Prepackaged Beef Cuts

Meat retailers will be supplied with free gold and silver colored foil inserts by Armour and Company of Chicago to bring brand identity to store prepackaged beef cuts in a new program recently started by the company. This means that steaks, roasts and other fresh beef cuts—nameless orphans in the strongly brand-conscious world of food retailing—will emerge from a longtime anonymity.

The Armour program is based on the belief that prestige brand identity, backed by consistent quality, can build customer loyalty and repeat business for beef cuts as well as for grocery shelf items. The firm's beef will benefit from long years of merchandising the Armour name on processed meats.

Brand identity will be achieved by use of aluminum foil labels to be inserted below the transparent wrapper of the self-service package. These inserts, shaped in the form of miniature prize ribbons, will specify the Armour brand of the meat.

Only the company's two top brands will be used in the program. A gold-colored foil ribbon will represent Armour Star De Luxe and a silver-colored foil ribbon will stand for

ORVILLE TITTLE (left) of the Tittle Supermarket, Valparaiso, Ind., one of the first to sign up for this new national beef program launched by Armour, is congratulated by Elmer Johnston, assistant manager of the Armour branch house at Gary, Indiana.

Armour Star. These brands are roughly equivalent to the U. S. Department of Agriculture Prime and Choice grades, respectively.

Armour will supply the inserts at no charge to retailers purchasing these grades of beef. In addition, Armour will supply each retailer participating in its beef program with a glass-framed 12 x 24 in. certificate of authorization to be displayed in the store. The certificate states that the store is authorized to use the labels, and guarantees that they will be used only on correspondingly branded Armour beef.

Georgia Packers Focus on Pork, Costs and Public

NEARLY 100 executives and officials representing most all of over 60 member firms of the Georgia Independent Meat Packers Association, convened at Savannah's General Oglethorpe Hotel recently for their third semi-annual meeting.

Among the highlights of the business sessions were: An address by Dr. R. F. Sewell, associate professor of animal husbandry at the University of Georgia. Dr. Sewell pointed out the growing importance of Georgia as a hog producing state. Midwestern hog producers are watching with interest the developments in Georgia's "confined" production experiments in the swine field. Dr. Sewell pointed out. This involves use of methods by

WHEN DELEGATES and officials of GIMPA were registering at Savannah's General Oglethorpe hotel for their semi-annual meeting, they were surprised to find in their midst a representative from "Georgia's Porkers." This unofficial delegate, "Mr. Swinesow," reported he "just dropped in to make sure that Georgia's pigs were going to be getting a fair shake from these fellows again in 1959." Surrounding "Mr. Swinesow" in the foreground are (left to right) Jim Beavers, Jr., president of GIMPA; Charlie Robbins, vice president, and Robert L. Redfern, chairman of the association's public relations committee. "Swinesow" has ideas on "confined" production.

contract growers similar to those employed by Georgia's poultry growers, which have built Georgia into the nation's largest poultry producing state. "While the South consumes 32 per cent of the pork produced in the U.S., it produces only 12 per cent. GIMPA should see that this area produces at least as much as it consumes," Dr. Sewell continued.

A panel discussion on "Costs and Your Future," moderated by Ellis Swint of Southern Foods, was one of the meeting's most interesting features. The panel agreed that there is a great need for increased margins in the meat industry in order to make necessary capital expenditures to improve efficiency, modernize plants, and meet the ever-growing and changing demand for new meat products. The panel discussion brought out that the average profit (after taxes) of 25 leading industries in the U.S. was 4.8 per cent of sales, while that of the meat industry was only .67 per cent. One speaker disclosed that: "If all meat packer profits was removed from meat, the food-bill savings to the average family of four would be only 7c per week."

A luncheon session was addressed by Clarence Walker of the Coca-Cola Company's industrial relations executive committee. His address was entitled "Public Relations Is Your Business."

Reliable Packing Employees Promote Products in Contest

The entire force of Reliable Packing Co., Chicago, are "playing salesmen" this month, that is, all except the company's regular Thompson Farms brand salesmen. All other employees are participating in a contest to pro-

mote Thompson Farms brand pork products, handled by the Reliable company.

The object of the company-wide contest is to gain new outlets by introducing the Thompson Farms brand pork products to Chicago food markets. Hundreds of dollars in prizes will be awarded to 15 winners.

RECENT PATENTS

The data listed below are only a brief review of recent patents pertinent to the readers and subscribers of this publication.

Complete copies of these patents may be obtained by writing to the Editorial department, The National Provisioner, and remitting 50c for each copy desired. For orders received from outside the United States the cost will be \$1.00 per copy.

No. 2,850,055, MEAT SAWING DEVICE HAVING REMOVABLE STATIONARY TABLE, patented September 2, 1958 by William Lasar, Downey, California.

The table is associated with a support frame, both being formed with complementary vertical surfaces and, when inter-fitted, cooperate to prevent the table from horizontal movement relative to the frame in a direction normal to the longitudinal axis of frame support members; with a pair of thumbscrews carried by the table in vertical alignment with the support members; the thumb screws engaging the vertically inclined surface of the support members so as to lock the table against tilting relative to the frame.

No. 2,851,722, HOG BEATER PADDLE, patented September 16, 1958, by Clare L. Pangborn of Ottumwa, Iowa.

A beater paddle for securement to a rotary shaft for dehairing a carcass is disclosed and comprises an elongated rubber-like body having a number of spaced wires positioned therein so that each wire in the body is spaced from each other wire, the wires being arranged in rows wherein the wires in each row are parallel and lie in a single plane and wherein these planes are spaced and parallel, the wires in adjacent rows being placed at an angle to one another.

No. 2,851,073, MEAT CUTTING MACHINE HAVING UNLOADING DISC AND FLEXIBLE BOWL SCRAPER, patented September 9, 1958 by Harold E. Schaller, Buffalo, N. Y., assignor to John E. Smith's

Sons Co., Buffalo, N. Y., a corporation of New York.

An unloading assembly is provided

for incorporation in a meat cutting machine having a bowl revolvable about a vertical axis, a concentric trough which is generally semicircular in cross section, and a bed rotatably supporting the bowl and having a portion arranged adjacent the outer rim of the trough.

No. 2,852,392, PROCESS FOR IMPROVING THE TEXTURE AND HOMOGENEITY OF GROUND MEAT PRODUCTS AND COMPOSITION THEREFOR, patented September 16, 1958 by Hans Huber and Kurt Vogt, Wiesbaden-Biebrich, Germany, assignors to Chemische Werke Albert, Wiesbaden-Kastel, Germany, a corporation of Germany.

A process for improving the texture and homogeneity of ground meat products is patented and comprises incorporating in ground meat a small amount of a mixture of sodium pyrophosphate with a potassium polyphosphate having less molecularly combined water and pyrophosphate in a ratio between and about 2:1 and 8:1.

No. 2,851,074, FOOD SLICER WITH MEANS FOR INDEXING AND LOCKING GAUGE PLATES IN SAFETY POSITION, patented September 9, 1958 by Henry J. Talge.

Kansas City, Mo., and Frank E. Aberer, Kansas City, Kans.; said Aberer assignor to said Talge.

The slicer is of the type having a

base, a rotary slicing blade mounted on the base in fixed relation thereto, the blade being shrouded about a portion of its circumference and leaving a cutting edge exposed for slicing purposes; and a thickness guide disposed generally parallel with the plane of the blade and to one side thereof and having one edge of arcuate form and closely adjacent the edge of the blade and shiftable in a direction generally normal to the plane of the blade to control the thickness of the slices produced.

No. 2,853,110, MEAT GUIDE FOR GRINDING MACHINES, patented September 23, 1958 by Carl F. Spang, Wellesley, Mass., assignor to Needham Manufacturing Co., Inc., Needham Heights, Mass., a corporation of Massachusetts.

In the hopper of the machine is a meat holding tray containing a guide-having walls including converging side wall portions connected at their com-

verging ends at and about a portion of an opening in the tray and forming an upward extension thereof adapted to guide meat thereinto. There is also a plate carried by the guide and having an opening therethrough coaxial with the hopper and of a size smaller than an opening in the hopper.

No. 2,852,812, MANUFACTURE OF ARTIFICIAL SAUSAGE CASINGS, patented September 23, 1958, by Emil Braun, Weinheim an der Bergstrasse, Germany, assignor to Carl Freudenberg, Kommanditgesellschaft auf Aktien, Weinheim, Germany.

The casings are formed by extruding a swollen plastic fibrous collagenous mass with dry content of only about 8 to 11 per cent and the steps are: incorporating into the mass, prior to extrusion, glyoxal in aqueous solution in an amount of 0.5 to 1.5 per cent by weight, based on the dry content of the mass, which amount of glyoxal does not affect the colloidal properties of the mass prior to, and during, the extrusion, and subjecting the extruded casing to a heat treatment at a temperature of about 65 to 120° C. for a time sufficient to produce the natural hardening effect of the glyoxal.

Meat Merchandising Parade

Pictorial and news review of recent developments in the field of merchandising meat and allied products.

BRIGHTLY COLORED aluminum foil labels are now being used by Armour and Company, Chicago, on company's complete line of canned foods. The attention-getting labels employ the use of a main color—red, blue or gold—to group products into "families." Included in the red group are Treet, Vienna sausage, chili con carne with beans and beef tamales. The blue group includes beef stew, chili con carne, tongue, potted meat, chopped ham, pork brains and tripe. The gold group includes corned beef hash, deviled ham and spaghetti with meat. Aluminum foil labels are a product of Raymond Loewy design studios of Chicago.

LITHO-PRINTED pictorial package for frozen chopped beef patties of Zion Kosher Meat Products, Inc., New York City, has bright yellow background, deep red and blue copy and serving suggestions in natural color. Marathon, Menasha, Wis., is the supplier.

FIVE TONS of doughnuts made with lard were given away at the U.S. exhibit during the British Food Fair, held in London during the first two weeks of September. Two automatic doughnut machines were kept working non-stop in order to meet the demand, but the queue of people had to be closed four times daily in order to permit stockpiling. About 12,000 doughnuts were distributed each day. Britain is, after Cuba, the largest export market for United States lard.

"PEEK-A-BOO" bacon package, pictured above, is employed by Peters Meat Products, Inc., St. Paul. Package is manufactured by Western-Waxide Division of Crown Zellerbach Corp., San Leandro, Calif.

POLYETHYLENE BAG pictured above is new package for quick frozen sweet pepper steaks made by Arnold Meat Specialties, Inc., Holyoke, Mass. The brightly-decorated 12-oz. bag is manufactured by the flexible packaging division of Continental Can Co. Arnold previously marketed product in cellophane bag. New package is printed in red and green on white background.

PICTORIALS brighten this colorful new lard package used by David Davies, Inc., Columbus and Zanesville, O. The package design has a bright yellow background with contrasting red and blue David Davies trademarks and four end use-suggestion pictorials.

KOCH

Precision FOOD DICER

CUTS PERFECT CUBES

Save time, money and exertion with this versatile machine. It cuts meats, fruits and vegetables—cooked or raw. Will even handle semi-frozen material. Produces smooth blocks, without crushing or tearing. Dimensions of product can be controlled between 3/16" and 2". Produces cubes, strips, or slices.

When funnel is empty the cutting blades come to a standstill. They do not mash or heat the residue on them.

Made in Germany, with German precision and economy. Two sizes, with hourly capacity from 300 pounds to 3,000 pounds.

Write or telephone, and find out how much you can do with this machine.

The Meat Trail...

AMI Department Head, 77, Retires After 33 Years

HENRY D. TEFFT, long-time director of the department of packinghouse practice, American Meat Institute, has retired. After graduating from Cornell University in 1903, Tefft entered the general laboratory of Armour and Company, Chicago, and later was transferred to the

HENRY TEFFT

company's lard refinery at East St. Louis and in Kansas City. Later Tefft joined Geo. A. Hormel & Co. at Austin, Minn., and was plant superintendent for Harris Abattoir Co., Toronto, now Canada Packers, Ltd. Tefft joined the Institute staff in 1925.

He is a member of the American Oil Chemists' Society, American Society of Refrigerating Engineers and the National Technical Task Committee on Industrial Wastes. Tefft serviced the following AMI committees: Improved methods of slaughter, safety, packinghouse practice, engineering and experimentation, textbooks, and meat packing plant waste disposal.

During his 33 years with the Institute, Tefft has edited and supervised the production of the following textbooks: *Pork Operations*, *Beef Operations*, *By-Products of the Meat Packing Industry*, *Sausage and Ready-to-Serve Meats*, and *Meat Packing Plant Superintendency*. These textbooks are published by the Institute of Meat Packing at the University of Chicago.

Dr. Boyd, Retired Meat Inspection Chief, Dies

DR. GEOFFREY A. BOYD, 63, retired chief of the bureau of meat inspection, California Department of Agriculture, died recently at the U. S. Veterans Administration Hospital in Oakland, California.

DR. G. A. BOYD

Dr. Boyd, a native of Kansas City, Kan., graduated from Colorado State University in Fort Collins with a degree in veterinary medicine in 1920.

After employment by the U. S. Department of Agriculture and a period of private practice, he entered the service of the California Department of Agriculture as a veterinary meat inspector in Marysville. He was made chief of the bureau on September 1, 1941. The California agency became a model for state inspection systems during his administration.

Surviving him are his widow, PEARL, and three grown sons.

Henry T. Quinn Retires From Active Duty With Morrell

HENRY T. QUINN, 65, veteran executive of John Morrell & Co., has recently retired from his position as director of sales for Morrell's Sioux Falls, South Dakota plant.

H. T. QUINN

Quinn began his career in the sales department of Morrell in 1911. In 1918, he left Morrell to join the Burrough's Company in Detroit. He rejoined the meat processing firm June

1, 1923 to become assistant sales manager. In 1939, he was made sales manager for the Topeka plant. Five years later he returned to Sioux Falls as sales manager. Quinn became plant manager in 1952 and later was named vice president. He became director of sales in December of 1955, the position he held until the time of his retirement. Quinn will continue with Morrell as a member of the board of directors.

Upon his retirement as sales head, Quinn will have ample opportunity to continue his work on community projects and civic activities. He has served as president of the Greater South Dakota Association; general chairman for the Sioux Valley Hospital building fund drive; head of the McKennan Hospital advisory board; chairman of the Sioux Falls centennial committee, and president of the chamber of commerce.

PLANTS

Remodeling of a building at the Armour and Company meat packing plant in West Fargo, N. D., has begun and transfer of branch house operations to the new facilities at the plant is expected to be completed by

BREAKING GROUND for a new Community Church to be located in Ridge Manor in west central Florida, is Peter C. Jensen, former Chicago meat packing salesman and executive for 27 years. The new church is the first in the 3,700-acre town located in Florida's lake and hill cattle country between Tampa and Orlando. Jensen is a steward and building fund committee member. Formerly with Edward Kohn Co., Chicago, Jensen resigned from his position of assistant general manager when he and his wife decided to move to the Sunshine State. Previously, he had been associated with Armour and Company for 17 years.

November 1. Construction includes installation of modern refrigeration units, a freezer and more than 1,000 ft. of rail for carcass hanging. New sales coolers will be directly connected with the producing departments of the plant and enclosed refrigerated loading space will be provided for trucks and rail cars. FRANK CONWAY, plant general manager, and OSCAR ANDERSON, branch house manager, have reported that the new facilities will enable the company to provide better service to the trade.

The Huntsville city school system has agreed to purchase the former Armour and Company branch on West Clinton st. in Huntsville, Ala. The building will be used for storage of foods to be frozen and refrigerated for the city's school lunchroom system and for general storage, reported Dr. RAYMOND L. CHRISTIAN, superintendent of education.

Construction of a new plant has been scheduled by the Sam Kane Wholesale Meat Market, Corpus Christi, Tex. The new plant, to be located on Highway 9, is expected to cost about \$85,000, including electrical and refrigeration installation. The plant will include a freezer and cooler space and a new, modern refrigerated loading dock.

Selection of George & Glover, a Savannah, Ga., advertising agency, to handle the account of the Roger Wood Packing Co., Savannah, has been announced by JOSEPH SOLANA and Cy WOOD, co-partners in the meat packing firm. The agency will administer all advertising and promotion of the Roger Wood products.

After two years of planning and hard work, Shen-Valley Meat Packers, Inc. of Timberville, Va., has opened a buying station located one mile west of U. S. 11, just north of Greenville, Va. Livestock producers in Rockbridge, Augusta and surrounding counties were invited to attend the opening of the station.

At least 55 employees of The H. L. Handy Co., an affiliated firm of Swift & Company, will remain with the company after it closes its Chicopee, Mass., operation in November. They will sell and staff a truck terminal, according to LELAND S. WELLS, manager. The Handy company is closing its major facilities at Chicopee because the present plant is considered uneconomical to operate.

The way has been cleared for the construction of a major meat processing plant just north of Greeley, Colo. Earlier, an 18-acre site south of the

Rath Opens New \$1¼-Million Plant

More than 1,600 people, including guests and employees and their families, attended the dedication and open house held recently at The Rath Packing Company's new \$1,250,000 branch in San Antonio, Tex.

Chairman of the board HOWARD H. RATH, from the company's home office in Waterloo, Ia., spoke at the dedication program and cut the ribbon across the door signifying that the new 50,000 sq. ft. building was officially opened and ready to go into operation.

With a television cameraman at work in the foreground, the top photograph shows Rath as he addressed those attending the dedication pro-

gram. Also visible on the platform are C. M. LEBERMANN, manager of the San Antonio branch, and MIKE PASSUR, mayor pro tem of San Antonio. MILTON E. GARY, manager of branch sales for Rath, and THEO F. WEISE, president of the San Antonio Chamber of Commerce also took part in the program. A special open house for employees and their families followed the dedication.

Bottom photo shows the new one-story building, constructed primarily of clay tile with a porcelainized steel front. The new establishment, which

will serve the area from Temple to the Rio Grande Valley, is located at 2959 E. Commerce st. The meat packing company has operated a branch in San Antonio for 31 years.

Bacon will be sliced, and sausage manufactured at the branch and a total of 48 meat products will be processed.

Greeley Chamber of Commerce industrial area was planned for the plant. These plans were abandoned when the town board of nearby Evans, Colo., voted four to one against this location. The plant will be built by the Greater Greeley Improvement Co. and leased to Capitol Packing Co. of

Denver, and Monfort Feed Lots of Greeley, the two companies which originally planned to build the plant.

Organization of the C & C Cattle and Processing Co. has been completed. A charter has been filed to incorporate the company with author-

ized capital stock of \$100,000, according to PAUL B. COSTNER, one of the incorporators. Costner and a brother, D. W. COSTNER, are owners and operators of Fairview Abattoir at Simpsonville, S. C., and the Cedar Grove Ranch in Lancaster county. Costner reports that the new company will have its principal place of business in Simpsonville. The corporation will operate abattoirs and farms, engage in the buying and selling of cattle, hogs and other livestock and the "feeding and readying of same for market."

JOBS

The appointment of HAROLD MILLER as secretary of American Packing Co., St. Louis, Mo., has been announced by EDWARD W. OLSZEWSKI, vice president. Miller has served with the company since November 16, 1936, in various capacities.

JACK G. THOMAS has recently been appointed public relations manager for Wilson & Co., Inc., Chicago. Thomas replaces DON W. YOUNG, who recently joined the public relations staff at Columbia Broadcasting System. Before coming to Wilson in July of this year, Thomas had served since

JACK THOMAS

December, 1957 as advertising sales representative for The Williams and Meyer Company of Chicago. His public relations background comes from his non-staff work with The Leukemia Research Foundation of Chicago. He joined the Foundation in January, 1955, and was made assistant publicity director. In April, 1958 he was elected vice president in charge of public relations.

The promotions of MARK P. BROWN, JR., and HILLIARD W. FARRINGTON have been announced by MARK P. BROWN, SR., president of Brown & Scott Packing Co., Wilmington, Del. Mark Brown, jr., who formerly served the company as office and credit manager, has been elected vice president. Farrington has been named treasurer. He previously held the position of sales manager. The two men succeed DONOVAN A. SCOTT, former vice president and treasurer, who is no longer with the company.

Two staff rearrangements have been announced by the American Meat Institute, Chicago. CARROLL CANNOLIS will return to the Chicago office from

his West Coast assignment, to assume the position of director of the membership department. As one of his first duties, Cannoles will conduct an aggressive program to expand the Institute's membership. Another AMI staff member, DON MACKENZIE, has been appointed to the post of director of the department of packinghouse practice.

L. E. WINNETT, recently named director of sales for John Morrell & Co., Ottumwa, Ia., has been elected a vice president of the company. Winnett served the Morrell company for six years as sales manager of the Sioux Falls, S. D., plant. He was elected an

L. E. WINNETT

assistant vice president in December of 1955, and named assistant director of sales last April. He transferred to Ottumwa last summer and assumed his current position as director of sales activities on October 1.

TRAILMARKS

LEE BERWICK of St. Joseph, La., has been chosen by the Louisiana Cattlemen's Association to tour the Midwest and the Northeast to obtain as much information as possible concerning every angle of the livestock industry. The trip, sponsored by Swift & Company, will include visits to Chicago, Boston, New York, Baltimore and Washington, D. C.

The cattle industry honored two of its top Texas livestock educators at ceremonies at the State Fair of Texas. Those honored were DEAN W. L. STANGEL, retiring dean of agriculture of Texas Tech College, Lubbock, and

DR. J. C. MILLER, who left a comparable position at Texas A & M last June to become head of the dairy-animal husbandry department at Oregon State College. Dean Stangel and Dr. Miller received the first distinguished service awards ever presented by the Texas and Southwestern Cattle Raisers Association. NORMAN MOSER, president of TSCRA, made the presentations at a special luncheon of the directors.

The names of HENRY NEUHOFF, president of Neuhoff Brothers Packers, Inc., Dallas, and HERMAN WALDMAN, partner in Dallas City Packing Co., were submitted as possible members of the advisory committee on humane slaughter methods to Secretary of Agriculture EZRA BENSON by the Texas Independent Meat Packers Association. The Texas and Southwestern Cattle Raisers Association gave Secretary Benson the names of NORMAN MOSER, president, and CHARLES STEWART, secretary, as its nominees.

ROY W. LENNARTSON, deputy administrator for marketing services of

R. LENNARTSON

the Agricultural Marketing Service, U. S. Department of Agriculture, will be one of the speakers at the forthcoming annual meeting of the National Association of Hotel and Restaurant Meat Purveyors, to be held in Hollywood Beach, Fla. His talk is titled "The School Lunch Program." Lennartson joined the Department of Agriculture as a member of the Farm Credit Administration's Dairy and Poultry Section after graduating from the University of Maryland. He served with the U. S. Army from September of 1942 through

SPECIAL AWARD for 40 years service as a U. S. Department of Agriculture meat inspector is presented to Sampson Valley (right) during ceremonies at Seattle Packing Co., subsidiary of The Cudahy Packing Co. Citation award was made by Dr. R. E. Pflugrad (left), inspector in charge of the Seattle station. Thomas T. Traylor (center), one of Valley's fellow inspectors, joined in the congratulations.

1945, at which time he returned to the Department. In 1950 he was appointed deputy assistant administrator for marketing, and the following year was made assistant administrator for marketing in the production and marketing administration. During the reorganization of the Department in late 1953, Lennartson was appointed to his present position of deputy administrator for marketing services at Washington, D. C.

R. B. MORTIMER, executive vice president and general manager of Peterson Manufacturing Co., Inc., Los Angeles, will retire from active management of the company, effective before the end of this month. After a brief vacation, Mortimer and his wife are planning a trip around the world in celebration of their thirtieth wedding anniversary. Mortimer is president of the National Renderers Association.

DEATHS

GEORGE W. VISSMAN, secretary-treasurer of Vissman Realty Co., Louisville, Ky., and a former meat packing company official, died at the age of 78. Vissman was secretary-treasurer of C. F. Vissman Co., a meat packing firm, when it was sold to

Louisville Provision Co., Inc. in 1950. He had worked about 50 years for the firm which was founded in 1875 by his grandfather, the late H. F. VISSMAN.

WILLIAM E. STURM, 61, a sales representative for S. R. Gerber Sausage Co., Inc., Buffalo, N. Y., died recently. Sturm had been employed with the Gerber sausage company for the past 21 years.

JOSEPH RADECKI died recently at the age of 75. Radecki formed the R-K Sausage Manufacturing Co., Inc., Cleveland, O., 40 years ago. He came to Cleveland in 1905 from his native Poland, and worked as a butcher until he opened his own business.

FREDERICK GOLL, a retired food merchant, died at the age of 73. Goll formed the Goll and Kaiser Provision Co., a wholesale and retail firm at Yonkers, N. Y., 30 years ago. He retired from the firm in 1938.

SAMUEL ROSENBERG, 68, died of a heart attack. Rosenberg was president of Cadillac Packing Co., a meat packing concern located in Detroit.

JOHN E. GILL, retired official of the Oklahoma City plant of Armour and Company, died at the age of 73. Gill served as a traffic manager for Armour

at the time of his retirement four years ago. He had been with the firm 37 years and was transferred to Oklahoma City from Armour's Omaha plant in 1936.

ARTHUR THOMAS WADDELL, retired Swift employe, died at the age of 73. Waddell retired nine years ago from the St. Joseph, Mo., plant of Swift & Company, where he was employed as an engineer for 31 years.

WALTER CLEGG, 60, head of the veal department of Swift & Company, Chicago, died recently. Clegg had been with Swift for 42 years, beginning his career in the invoice department of the Chicago office.

CLARENCE E. KENNEDY, 63, recently died of cancer. Kennedy served as chief engineer at Williams Meat Co., Kansas City, Kan., where he had worked for 22 years.

ANTON T. SIMION, 76, retired employe of The Hull & Dillon Packing Co., Pittsburg, Kan., died recently. Simion retired from Hull & Dillon five years ago.

CLYDE W. BATTAGLINI, a meat processor, died recently. Battaglini had been employed with the Philadelphia, Pa., branch of Wilson & Co., Inc., for the past 12 years.

Meat Production Swings Upward

The trend in meat production swung upward last week on increased slaughter of all classes of livestock, as volume for the period totaled 395,000,000 lbs. for about a 5 per cent gain over the previous week's 375,000,000 lbs. Output, however, lagged below the 408,000,000 lbs. produced in the same week of 1957. The gain in cattle kill was slight for the week, but numbered about 39,000 head smaller than last year. Hog slaughter was up by about 110,000 head for the week and about 10,000 head larger than last year. Estimated slaughter and meat production by classes appear below as follows:

Week Ended	BEEF		PORK (Excl. lard)	
	Number M's	Production Mil. lbs.	Number M's	Production Mil. lbs.
Oct. 11, 1958	353	200.5	1,300	149.6

Oct. 12, 1957	217	120	95	45	14.0	40.2

Meat Inventories Decline in September; Decrease in Pork Offsets Beef Increase

PORK, moving out of cold storage in a relatively heavy volume in September, more than offset a moderate build-up in stocks of beef for a net decline in the total volume of all meats for the month from those on August 31. Total volume of all meats in cold storage on September 30 at 313,459,000 lbs. were down by about 9,000,000 lbs. from the 332,721,000

lbs. in storage a month before, but were about 8,000,000 lbs. larger than a year earlier. However, closing September meat inventories were considerably smaller than the five-year 1953-57 average of 354,326,000 lbs.

Beef holdings rose by about 5,000,000 lbs. to 122,230,000 lbs. at the close of September from 117,850,000 lbs. at the close of August.

U. S. COLD STORAGE MEAT STOCKS, SEPTEMBER 30, 1958

Total, all meats	313,459	332,721	306,472	354,326

On September 30, 1958 the government held in cold storage outside of processors' hands 2,491,000 lbs. of beef and 1,856,000 lbs. of pork. *Not reported separately previous to 1957.

Closing September beef stocks were also well above those in storage a year earlier and moderately larger than the five-year average of 117,737,000 lbs.

Pork stocks, on the other hand, declined by nearly 25,000,000 lbs. to 125,956,000 lbs. from closing August inventories of 149,128,000 lbs. Pork holdings on September 30 were about 8,000,000 lbs. smaller than a year earlier and about 53,000,000 lbs. below the average.

Stocks of other meats varied, with those of veal up for the month, while stocks of lamb and mutton declined, as did holdings of canned meats.

CHICAGO LARD STOCKS

Lard inventories in Chicago on October 14 totaled 4,478,646 lbs., according to the Chicago Board of Trade. This volume compared with 4,672,519 lbs. in storage on September 30 and 20,958,953 lbs. in storage on September 14, 1957.

Lard stocks by classes (in pounds) appear in the table below:

	Oct. 14 1958	Sept. 30 1958	Oct. 14 1957
P.S. Lard (a)	2,269,467	2,545,230	1,308,000
P.S. Lard (b)	160,530	—	12,868,592

TOTAL LARD	4,478,646	4,672,519	20,958,953

(a) Made since Oct. 1, 1958.
(b) Made Previous to Oct. 1, 1958.

HOG-CORN RATIOS

The hog-corn ratio based on barrows and gilts at Chicago for the week ended Oct. 11, 1958 was 15.4, the U. S. Department of Agriculture has reported. This ratio compared with the 15.6 ratio for the preceding week and 14.5 a year ago. These ratios were calculated on the basis of No. 3 yellow corn selling at \$1.273, \$1.255 and \$1.216 per bu. during the three periods, respectively.

Meats Lowest in 7 Months

Meat prices, breaking sharply in the week ended October 7, were at their lowest levels since early March. The average wholesale price index on meat at 105.4 for the period was down 3.0 per cent from the previous week. The average commodity price index at 118.7 was the lowest since early February. The same indexes for the corresponding week of last year were 91.6 and 117.5 per cent, respectively. Current indexes were calculated on the basis of the 1947-49 average of 100 per cent.

PROCESSED MEATS . . . SUPPLIES

U. S. Meat Imports Up More in Aug.

Entry of 85,879,576 lbs. of foreign meat into this country during August established a new high on such movement for the year, if not a record. The August volume of meat imports was almost three times the 31,577,011 lbs. imported in August last year. Of the month's total volume of meat imports, New Zealand contributed 30,315,296 lbs. followed by 19,648,985 lbs. from Argentina. Imports from New Zealand included 28,533,331 lbs. of fresh beef and veal, much of it boneless processing stock. Imports from Argentina included 13,816,794 lbs. of processed beef and 5,468,767 lbs. of canned beef. U. S. meat imports in August by country of origin are listed below as follows:

Country of origin	Fresh meats and edible offal			Cured meats	
	Beef and veal Pounds	Lamb and mutton Pounds	Pork Pounds	Beef Pounds	Pork Pounds
Argentina	1,884,426	1,948,908	13,816,794	4,005

Revision: May 1957 Imports of canned meats, pork 8,974,429 lbs.; Total (all meats) 35,806,698 lbs. Jan.-June 1957, canned meats, pork 60,027,437 lbs.; Totals (all meats) 170,091,862 lbs.

October 1 Estimate Of 1958 Corn Crop Would Set Record

The U. S. Department of Agriculture on October 1 revised its estimate of the 1958 corn crop upward to 3,686,218,000 bu. from 3,588,766,000 bu. on September 1. The new estimate, if realized, would establish a new all-time record. Last year farmers harvested 3,402,832,000 bu. of corn, with the 10-year average at 3,144,304,000 bu. Corn yield was placed at 50.4 bu. per acre compared with 46.8 bu. last year.

The year's wheat crop was placed at 1,449,498,000 bu., made up of 1,170,768,000 bu. of winter wheat and 278,730,000 bu. of the spring-planted variety. The spring wheat estimate was up from 275,696,000 bu. on September 1. Yield of all wheat per acre at 27.0 bu. represented a sharp increase over last year's yield of 21.7 bu.

Soybean production was estimated at 572,586,000 bu. compared with the September estimate of 560,776,000 bu. and last year's harvest of 479,841,000 bu.

MARGINS SCORE SWEEPING ADVANCES

(Chicago costs, credits and realizations for Monday and Tuesday)

Live hog costs, declining at a more rapid rate than the market on pork, resulted in sweeping improvements in cut-out margins this week. Margins on heavy hogs scored the sharpest advances, emerging in the plus column, while only those on mediumweights were still minus.

	-180-220 lbs.—		-220-240 lbs.—		-240-270 lbs.—

TALLOWES AND GREASES

Wednesday October 15, 1958

The market closed basically firm last week, but with actual trading spotty. Bleachable fancy tallow was on call at 7½¢ c.a.f. Chicago, and at 7¼¢ f.o.b. Chicago, with the asking price 8¢. In the East, bleachable was bid at 8½¢@8¾¢ c.a.f., with 8¾¢ the asking price.

As the new week opened, a firm undertone was still apparent, although many eastern offices were closed in observance of Columbus Day. Bleachable fancy tallow was again on call at 7½¢ c.a.f. Chicago and at 7¼¢, f.o.b. Chicago, with 8¢ c.a.f. asked. Yellow grease was firm at 6¼¢@6½¢ c.a.f. Chicago, depending on production. Choice white grease, all hog, was nominal at 8½¢@8¾¢ delivered East. Some movement of special tallow was reported at 7½¢ c.a.f. Chicago, and of yellow grease at 6¼¢ c.a.f. Chicago. Some edible tallow moved at 10½¢ f.o.b. River. The Chicago basis was nomi-

nally quoted at 10½¢ per lb.

On Tuesday, trading was slow, and eastern demand less aggressive. Best bids on bleachable fancy tallow were at 8½¢ c.a.f. and choice white grease, all hog, was bid at 8½¢ delivered. Locally, bleachable fancy was bid at 7½¢ c.a.f., with 8¢ asked. Special tallow was firm at 7¼¢@7½¢ c.a.f. Chicago. Yellow grease was quiet, and nominally quoted at 6¼¢@6½¢ c.a.f. Chicago. Sales of edible tallow were at 10½¢ certain River points and at 10¾¢ Chicago basis. A tank of bleachable fancy tallow traded at 7¼¢ f.o.b. Chicago.

At midweek, the market was quiet early although some movement of edible tallow was reported at 10½¢ f.o.b. River. Bleachable fancy tallow was bid at 7½¢ c.a.f. Chicago, with best bids East at 8½¢ c.a.f. Special tallow was bid at 7¼¢@7½¢ c.a.f. Chicago. No. 1 tallow was bid at 7¢. Choice white grease, all hog, was bid at 7½¢ c.a.f. Chicago, and at 8½¢ delivered East, with 8¾¢ asked. Yellow grease was bid at 7¼¢ c.a.f. Eastern price zone.

HIDES AND SKINS

Packer hides gain, some reaching their highest levels in two years—Small packer and country hides slow to react to gains in other classes, although strong—Light trading in calfskins and kipskins on strong undertone—Good grade sheepskins in broad demand, with others slow.

CHICAGO

PACKER HIDES: A stronger undertone was noted in packer hides at the close of last week. On Thursday, about 10,000 light cows, some at premium River points, sold ½c higher at 18½c. Others sold at steady levels from various points. Also light steers sold at 16½@17c, up ½c and branded cows firmed. Northerns sold ½c higher at 12½c, as did Southwesterns at 13½c. On Friday, about 13,000 heavy cows sold ½c higher at 13½@14c per lb.

Higher asking prices featured early trading this week. Light cows and light steers reached the highest level in more than two years. On Tuesday, light steers sold ½c higher at 17c, and mixed packs of lights and ex-lights brought 17c and 19½c, all River points. At midweek, about 24,000 heavy steers sold ½c higher at 12½@13c and butt-branded steers sold ½c higher at 10½c. Some Colorados sold at 9½c, also ½c higher.

SMALL PACKER AND COUNTRY HIDES: Some improvement was noted in the small packer hide market, with most offerings held at stronger prices. Despite buyer resistance, some sales were reported at higher prices. Midwestern natives, 50/52-lb averages were listed at 13c nominal, and 60/62's at 11@11½c. Ohio, plump 52-lb. averages brought 14c, selected. Country 50/52-lb. locker-butchers were quoted stronger at 10@10½c, 48/50-lb. renderers at 8½@9c, and No. 3's moved slowly at 6¼@6½c. Horsehides were steady, with trimmed Northerns quoted at 6.50@7.00, and untrimmed at 7.00@7.50.

CALFSKINS AND KIPSKINS: Trading was light, and offerings scant. Northern heavy calfskins were quoted at 52½c nominal. Last trading on Northern light calfskins was at 57½c. Country allweight calfskins met good demand at 26c, and allweight kipskins were firm at 20c f.o.b. shipping points. Small packer allweight calfskins were in light supply, being quoted at 40@45c, and allweight kipskins at 29@30c.

SHEEPSKINS: The shearing mar-

ket was little changed from last week. Good production stock moved well, but coarse kinds were draggy. No. 1 Midwestern-River were listed at 1.00@1.45, and No. 1 Southwesterns sold mostly at around 2.00. Midwestern No. 2's sold at 50@57½c, and No. 3's at 25@30c. Interior lambs were stronger, with sales at 1.75@1.85 for October production. Fall clips were steady at 1.75@2.25, as to quality, and dry pelts were nominal at .17@.18.

LIVESTOCK MARKETS...Weekly Review

ANCA Convention To Stress Marketing, Feeding Problems

The program of the 62nd annual convention of the American National Cattlemen's Association in Omaha, January 14-17, will emphasize livestock marketing and cattle feeding problems of the industry.

Radford S. Hall, executive secretary, said that speakers being selected will be national authorities on various phases of feeding and marketing, as well as of basic research problems of the industry.

A highlight of the program will be the first full-scale report of the association's fact-finding committee which has drawn upon the services of top economists and industry leaders for answers to many problems of cattle raising, feeding and marketing, and of beef processing and retailing. About 2,000 stockmen from 40 states are expected to attend the meeting.

Angus Group Marks 75 Years

The 75th anniversary of the American Angus Association will be observed by A-A breeders from all parts of North America at the annual meeting and banquet to be held in conjunction with the International Livestock Exposition at Chicago, December 2. Chicago was the setting on November 21 1883, for the formal organization of the national association of Aberdeen-Angus breeders.

INTERIOR IOWA, SO. MINN.

Receipts of hogs and sheep at interior markets compared, as reported by the USDA:

	Hogs	Sheep
Sept. 1958	1,577,000	98,100
Aug. 1958	1,222,500	90,300
Sept. 1957	1,502,000	100,100

LIVESTOCK AT 59 MARKETS

A summary of receipts and disposition of livestock at 59 public markets during August 1958 and 1957, as reported by the U. S. Department of Agriculture:

TRUCKED-IN RECEIPTS AT 59 MARKETS

Trucked-in receipts of livestock by classes during Aug. 1958 and 1957 at 59 public markets:

TOTAL TRUCKED-IN RECEIPTS		
	Number of head	August 1958
Cattle	1,381,918	1,620,280
Calves	229,388	303,470
Hogs	2,073,604	2,080,376
Sheep and lambs	638,530	645,267

Trucked-in receipts at 59 public markets constituted the following percentages of total Aug. receipts: Cattle 91.4; calves, 84.8; hogs, 90.3; and sheep, 61.5. Percentages in 1957 were 87.7, 83.8, 89.4 and 61.0.

NLSMC Set for June 25-27

The 1959 National Livestock Marketing Congress has been scheduled to convene June 25-27 at Cedar Rapids, Ia. Announcement was made by the National Association of Livestock Auction Markets following an initial meeting by the special planning committee. The annual convention of the national association will be held at the same time.

Canada Sets Pork Supports

The Canadian Agricultural Stabilization Board announced that the support price for Grade A dressed hog carcasses at Saskatoon, Calgary and Edmonton will be \$21.50 per cwt. The price was fixed to put western supports on a par with Toronto which is \$25. Canadian officials expect pork prices to dip near support levels this fall, when large marketings are expected from the producers.

Oppose Hog 'Buying Stations'

Members of the Nebraska Livestock Feeders Association attending the recent annual convention of the group in Grand Island, adopted resolutions in which they opposed vertical integration and the establishment of county concentration buying points for hogs.

ST. LOUIS HOGS IN SEPT.

Hog receipts, weights and range of prices at the St. Louis NSY were reported by H. L. Sparks & Co., as follows:

POSITION WANTED

**EXPERT
SALAMI AND SAUSAGE MAKER**
ALL-AROUND BUTCHER, EUROPEAN TRAINED
Refugee from Communist Hungary, age 40, married, wants opportunity to give competent, conscientious, loyal service to a U.S. sausage plant or packer. Have 7 years' European apprenticeship and training, 11 years' experience as expert salami, sausage maker and all-around butcher. My English sufficient and improving. Now employed in Canada, can get preferred immigrant permit if you will employ me. You will not regret it if you help me. Travel at own expense. References. W-408, THE NATIONAL PROVISIONER, 15 W. Huron St., Chicago 10, Ill.

SUPERVISOR: 22 years' experience in pork kill and cut, beef kill, pork and boning, curing, smoking, rendering, refrigeration, hides and maintenance. Can train personnel and control costs, quantity and quality. East, west coast or mid-south preferred. W-392, THE NATIONAL PROVISIONER, 15 W. Huron St., Chicago 10, Ill.

INDUSTRIAL ENGINEER: With 10 years' experience and responsibility in the packing industry—time study, methods, costs, cost controls, yields, incentives, plant layout, etc., desires challenging staff or managerial engineering position. Resume upon request. W-393, THE NATIONAL PROVISIONER, 15 W. Huron St., Chicago 10, Ill.

TREASURER & CONTROLLER
WIDE EXPERIENCE: In packinghouse finance, auditing and accounting including I.B.M. Seeks position in New England states or Florida. W-407, THE NATIONAL PROVISIONER, 527 Madison Ave., New York 22, N.Y.

CANNED MEAT SALES
FOOD BROKER: Is interested in obtaining a line of canned hams and meat specialties to sell in New England. W-408, THE NATIONAL PROVISIONER, 527 Madison Ave., New York 22, N.Y.

POSITION WANTED

COST AND BUDGET SUPERVISOR
My experience includes general and cost accounting in manufacturing plants and in meat packing plants, and time study of meat packing operations. I can supervise and operate tabulating equipment. I can plan and set up tab procedures for cost and inventory control, sales analysis. Prefer midwest or central states location. W-405, THE NATIONAL PROVISIONER, 15 W. Huron St., Chicago 10, Ill.

BEEF MAN: 20 years' experience in sales and production in wholesale and plant operation. Thorough knowledge of breaking, fabricating and boning. Chicago area preferred. W-404, THE NATIONAL PROVISIONER, 15 W. Huron St., Chicago 10, Ill.

HELP WANTED

SAUSAGE FOREMAN
WORKING ASSISTANT: To superintendent. Must be familiar with all sausage making, smoking and S.P. operations.
SLOTKOWSKI SAUSAGE CO.
2021 W. 18th St., Chicago 8, Ill.
